

Making a Web Filtering decision ?

When you need these features... ..

- High availability, high performance, fault tolerant platform, with significantly better throughput than competitive products
- Uninterrupted performance - including instantaneous bypass or automatic failover to a hot standby unit
- Bridge-based, hack-proof design solution - dedicated appliance with zero O/S support/compatibility issues, easy deployment
- Role-based administration with audit trail, multiple enterprise admin logins, and master-slave appliance configurations
- *Collaborative Filtering™* - globally meshed, automated URL discovery, classification, distribution and quality control; *hourly* URL list updates
- Force all search engine usage to Google "Strict SafeSearch" mode option, with search string control features
- Integrated, fully-featured and state-of-the-art *Advanced Reporting Module* for template-driven reporting with automated delivery to management desktop
- *Live Monitoring* with traps and real-time alerts
- *Silent Mode* - monitor without filtering; "silent mode savings report" - calculate cost savings *before* filtering is implemented
- Secure remote administration via web interface, including RSA one-time password authentication, SSH & SSL encryption for all administration, updates, and device communications
- Control over 80 non-web-based protocols, chat protocols, etc. including streaming media, file downloads, etc.

...and more...

...including these ...

- SSL certificate management system for enhanced Mobile Malicious code protection credentials
- Automated software and URL updates, no activation keys
- Full VLAN support; fully scaleable from 50 to 50,000+ users
- Remote Client - filtering workstations outside the corporate network
- Cost-effective, platform-independent solution
- Highly automated and engineered to absolutely minimize administrative time and costs
- A global leader in Web Filtering technology!
